

Applying the SAS System SETINIT in the UNIX / Solaris / Linux Environments for Release 8.2

For AIX, HP-UX and Solaris

Complete the following steps to apply your SETINIT. Note that !SASROOT refers to the directory path of your SAS System installation.

1. Download your updated license file to a location you can navigate to during the renewal process.
2. Run !SASROOT/sassetup. Make sure you have appropriate privilege to update files located in the SASROOT directory.
3. Select Run Setup Utilities from the SAS Setup Primary Menu.
4. Select Perform SAS System Configuration.
5. Select Apply SETINIT to Authorize the SAS System. Specify the location of the SETINIT file you downloaded in step 1.
6. If errors occur, a message will be displayed indicating the log files to be checked. If the SETINIT applies successfully, you can enter Q to quit sassetup and run SAS normally.
