

Applying the SAS System SETINIT in the Microsoft Windows Environment for Release 8.2

Choose **ONE** of these two methods to update your license information.

Method 1 Submitting License Code Inside of SAS

(Do not have SAS running when you begin this process)

- a. Download the setinit.sss file to your desktop.
- b. Double click on the setinit.sss file

This should launch SAS and submit the setinit information.

Method 2 Right Click on the file which you have saved as SETINIT.SSS

- a. Download the setinit.sss file to your desktop.
- b. Right-click on the SETINIT.SSS file you just saved to your desktop
- c. Select 'Apply authorization code to SAS V8' from the menu selection.
- d. SAS will be invoked in batch mode, and the authorization code contained in the SETINIT.SSS file will be applied.

A SETINIT.SSS.LOG file will be created in the same location as the SETINIT.SSS file. You can check the log file to make sure the license has been updated. If your license has been updated correctly, you will see the following note in the log: Note: Siteinfo data have been updated.

In both of the methods listed above, please note that the new SETINIT.SSS file is not copied to the !SASROOT\CORE\SASINST directory during these types of update. You may copy the file there manually. By default, this location is c:\Program Files\SAS Institute\SAS\V8\core\sasinst. After updating by one of the methods above, you can save the new SETINIT.SSS to the correct location. (rename the outdated SETINIT.SSS prior to saving the updated one)

To verify your license information, submit the following code in your SAS Editor window:

```
proc setinit; run;
```

The correct license information will be displayed in the SAS Log window.

For additional information go to: <http://support.sas.com/setinit>
