

SAS 9.1.2 and 9.1.3 Software Renewal Instructions for UNIX/Linux Renewing SAS Software

The license information you download is in the form of SAS Installation Data, which includes your SETINIT or license file.

SAS Installation Data

Save the SAS Installation Data to disk. Do not change the name or file type of the attachment. Save the attached file to your login directory on the system where your SAS software is installed, as follows:

```
$HOME/sas_installation_data/(filename).txt
```

Renewing Your Installed SAS Software

1. Run SAS Setup from !SASROOT/sassetup. Make sure you have the appropriate privilege to update files in SASROOT.
2. Select Run Setup Utilities from the SAS Setup Primary Menu.
3. Select Renew SAS Software.
4. Choose the appropriate source of your SAS Installation Data when prompted. Enter the path of the saved e-mail attachment.
5. Your SAS Installation Data is applied immediately. SAS Setup will report if the task was completed successfully or not. If errors occur, a message is displayed indicating the log files you should check. If the SAS Installation Data applies successfully, you can enter Q to quit SAS Setup and run the SAS System normally.

For additional assistance you can view the Software Renewal Instructions online at

<http://support.sas.com/documentation/installcenter/>

(Once you are at the Install Center, click on the platform you are interested in, and then SAS 9.1.3 to view SAS Installation Kit documentation.)
