

Software Renewal Instructions for SAS 9.1.2 and SAS 9.1.3 Windows Versions

1. Download your updated license file to a location you can navigate to during the renewal process.
2. Use the Renew SAS Software utility to apply SAS Installation Data.
 - a) From the Start menu
 - i. Select > Programs (or All Programs on Windows XP)
 - ii. Select > SAS
 - iii. Select > SAS 9.1 Utilities
 - iv. Select > Renew SAS Software

If the Renew SAS Software tool cannot be reached from the Start menu, there are two other ways to reach it:

- The tool can be located on your hard drive. Open Windows Explorer (Click on the Start button, select run from the menu and type Explorer). Go to the following directory: c:\program files\sas\sassystem\9.1\core\sasinst\sasrenew. Double click on sasrenew.exe to start the Renew SAS Software tool.
- The tool can also be located on the Software Disk 1 CD, in the directory \sas\core\sasinst\sasrenew. You can run sasrenew.exe from there.

3. Follow the steps
 - a) Select a SAS Installation Data File (this is the file you just downloaded)
 - b) b. Choose from available files (your file will look like 'sas91_21?????.txt')
 - c) c. Specify product location (this is where you saved the text license file)

Click Next to advance through the three steps.
